

SONGER EQUIPMENT SETTING:

STAGING FOR SAFE AND EFFICIENT SUCCESS.

On site equipment placement is a long-term game. Our approach to planning, shoring and placement of heavy industrial cranes, construction equipment scaffolding, material storage, staging, work trailer placement and jobsite thruways maximizes jobsite safety without sacrificing efficiency or utility. We save a lot of time this way, but never at the expense of a safe build.

WHAT WE BRING TO THE JOB:

- Cost/benefit analysis
- Site planning/engineering consulting
- Contract/subcontract bidding and management
- Shoring, footing, stabilization and perimeter management
- Cranes, construction equipment, heavy materials, piping, pressure vessels
- Expertise setting within operational jobsites
- Gantry/scaffold/site traffic management
- Safety planning and site staging
- Daily site safety and job hazard briefings

NO TWO SETS ARE ALIKE.

Whether it's an industrial add on integrated into an operational facility, or something new we get to build from start to finish, one thing is for certain: each job is its own animal. Industrial equipment setting is a giant jigsaw puzzle we solve correctly—and safely—on each job.

Guided by our trademarked Make Accidents Preventable (M.A.P.™) protocols, the pieces of the puzzle necessary to cost-effective coordination, staging and setting of equipment fall into place with intent and purpose: Build safely and efficiently at every stage of the job.

SONGER. READY TO GO TO WORK.
